DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-11, 16, and 28 are rejected under 35 U.S.C. 102(b) as being anticipated by Cochran et al (Oxidation of Al-Mg melts in Air, oxygen, flue gas, and Carbon dioxide, IDS).

Cochran et al disclose a method of improving surface properties on a molten aluminum alloy by contacting with a humidified atmosphere (page 329). The humidified gas is carbon dioxide. The casting temperature is 750 degrees C, with magnesium content at least 0.32 %. (page 329).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any

Art Unit: 1725

evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 12-16, 19-21 rejected under 35 U.S.C. 103(a) as being unpatentable over Cochran et al.

Cochran et al fails to teach the aluminum alloy type and working the ingot.

However, it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to choose a specific type of aluminum alloy suitable for any casting method such as ingot working, since Cochran et al disclose controlling surface quality on aluminum metal.

Allowable Subject Matter

4. Claims 17, 18, 22-24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior arts of record fail to teach the claimed moisture content.
